COVID-19 Testing
Frequently Asked Questions (FAQ)

North East Medical Services (NEMS) is providing COVID-19 testing to SYMPTOMATIC and HIGH-RISK ASYMPTOMATIC patients that have a testing order from a NEMS provider. The COVID-19 test will be conducted through one of our drive-thru or walk-thru testing sites.

What is the COVID-19 Test?

NEMS conducts the following type of COVID-19 test:

- Swab testing: this test is conducted by swabbing the inside of your nose or mouth and is used to detect the virus in your body.

How long will it take to get my results and how will I be informed?

The turnaround time for COVID-19 test results is about 2 to 4 days but may be longer due to lab capacity. If your test result is positive, the NEMS provider who ordered your COVID-19 test will call you as soon as the result becomes available. If your test result is negative, you will receive a notification letter through the mail.

Will my insurance cover the test?

Most insurances will cover the COVID-19 test. If you have a commercial plan, your deductible, out-of-pocket, and any copayments may apply. If you have Medicare or Medi-Cal, your insurance will cover the full cost of the test.

If you don’t have insurance or if your insurance plan doesn’t cover COVID-19 testing and related services, you may qualify for Medi-Cal’s COVID-19 Presumptive Eligibility Program. This program covers COVID-19 diagnostic testing, testing-related services and treatment services at no cost. If you choose not to enroll in this Medi-Cal program, NEMS offers a sliding fee discount program and you may qualify for free testing. In order to enroll in either programs, please call NEMS Member Services at 415-391-9686 ext. 8160 or 650-550-3923 ext. 8160 or 408-573-9686 ext. 8160.

What should I do while I wait for the results of my test?

The home isolation and home quarantine guidance outlined in this document meet the requirements set forth by San Mateo county. If you reside in a different county, please refer to your county’s public health department for specific isolation and quarantine guidance.
A close contact of a COVID-19 positive person includes any person who, from 48 hours before the COVID-19 positive person’s symptoms began:

- Lived in or stayed at the same residence as the person with COVID-19 when they were not following Home Isolation Instructions; or
- Was an intimate sexual partner; or
- Was within 6 ft of an infected person for a cumulative total of 15 minutes or more over a 24-hour period, regardless of whether either of you were wearing a face covering, or
- Had direct contact for any amount of time with the body fluids and/or secretions (e.g., coughed or sneezed on you, shared utensils with, or was provided care by or provided care for them without wearing a mask, gown, and gloves).

If you had a COVID-19 test and have no symptoms and are not a close contact, you do not need to follow the isolation or quarantine guidance and can just wait for the results of your COVID-19 test.

**What should I do if my symptoms worsen?**

If you develop additional symptoms or if your symptoms worsen, notify your primary care provider. In the case of an emergency, call 911 and also let them know you are waiting for the results of a COVID-19 test. Symptoms that indicate you should seek medical care include**:

- Difficulty breathing
- Can’t keep fluids down
- Dehydration
- Confusion

** This list is not all inclusive. Please consult your medical provider, or 911 in the case of an emergency, for any other symptoms that are severe or concerning. NEMS clinics can be reached at (415) 391-9686 or (650) 550-3923 or (408) 573-9686.

**What if my COVID-19 test is positive?**

If your test result is positive for COVID-19, a healthcare provider will evaluate whether you can be cared for at home or whether you should be treated in the hospital. If your provider determines you can be treated at home, follow the Home Isolation Guidance in the section titled “What should I do while I wait for the results of my test?”

If your test result is positive and you have no symptoms, you should follow the Home Isolation Guidance but remain in isolation for 10 days from the date the positive test was performed.

While most infected persons make a full recovery from COVID-19, you must follow the Home Isolation Guidance along with the following guidelines:

- There is no specific medicine to treat COVID-19 so it is important to get plenty of rest, drink plenty of fluids and use acetaminophen to reduce fever. (Check with a doctor before giving any medications to children under 2 years of age.)
- Monitor your symptoms, especially if you are over age 60, have chronic conditions such as lung disease, heart disease or diabetes, have a weakened immune system and/or are pregnant.
- If your symptoms get worse such as difficulty breathing, call your doctor immediately. If it is an emergency, call 911. In both instances tell them you have been diagnosed with COVID-19.
- If your test is positive, any close contacts you had within 48 hours before your symptoms began will need to follow the Home Quarantine Guidance.
- If you meet any of the following criteria, you should remain in isolation for 14 days after your first symptoms began and at least seven days after recovery: a) you are immunocompromised, b) you could pose a risk of transmitting infection to a vulnerable individuals, or c) you normally reside in congregate settings (i.e. retirement communities, shelters, correctional/detention facilities, etc.)

**What if my COVID-19 test is negative?**

- If your test result is negative, you have NO symptoms and if you haven’t had close contact with a COVID-19 positive person, you can resume your daily life with proper social distancing.
- If your test result is negative, you HAVE symptoms but haven’t had close contact with a COVID-19 positive person:
  - If your primary care provider thinks you have COVID-19, continue to follow the Home Isolation Guidance.
  - If you are in close contact with a vulnerable person, consider remaining in isolation for the entire isolation period as described in Home Isolation Guidance.
  - Otherwise, follow the Home Isolation Guidance until your fever has been gone without taking fever-lowering medication and your symptoms have been improving, both for 24 hours.
- If your test result is negative for COVID-19, but you were a close contact of a COVID-19 positive person, follow the Home Quarantine Guidance.

**Should my household member(s) get tested for COVID-19?**

Your close contacts should follow the Home Quarantine Guidance if your COVID-19 test is positive, including monitoring their symptoms and reaching out to a provider for a COVID-19 diagnostic test. Call NEMS at (415) 391-9686 or (650) 550-3923 or (408) 573-9686 to find the nearest COVID-19 testing location.
